

SEPTIC SYSTEM PREVENTATIVE MAINTENANCE FOR CONVENIENCE STORES

FOR YOUR CONVENIENCE

Convenience store owners face septic-related challenges everyday with more stringent environmental and budgetary constraints. These challenges have to be met with new and innovative approaches for continuous improvement that will also reduce costs and optimize operational conditions.

EcoHancer® is a revolutionary, all-natural formula that helps treat a variety of septic system problems that convenience stores often face by:

- **Clarifying Septic Tank Effluent**
- **Maximizing Drain Field Performance**
- **Remediating & Renovating Drain Fields**

The difference between all other additives and EcoHancer®: Most additives are bacteria cultures or enzymes. Often business operators don't realize that the bacteria-killing products used in the business everyday are inevitably killing these bacteria and canceling out those efforts.

EcoHancer® is different because:

- it is a potent all-natural food for the existing native bacteria in your septic system - not a bacteria culture or enzyme. This stimulates them to grow in volume and increase in activity.
- it is the only septic system additive proven to neutralize toxins and pollutants that can kill beneficial bacteria.

As a result, your system benefits from a healthier, more robust biological workforce, allowing for more efficient digestion of waste. This reduces the risk of contamination in the drain field and helps stores meet stringent regulations more easily.

PROFESSIONAL PERSPECTIVE

Bob Fiori, Gulf, Cohasset, MA

"I would have never believed it would work this well! The septic system at my location began failing in 2005 when we were pumping it bi-weekly.

Over the years various treatments had been tried, but to no avail. Many experts blamed the failure on the fact that we have a Dunkin Donuts in our store and the grease that is created from their products getting into the system. [The system] hasn't been pumped at all since the first treatment [in April] and it's now the first week of October. I am amazed at how well EcoHancer has worked to solve my problem. I highly recommend to anyone with a septic system to give this product a try."

WITH ECOHANCER® YOU CAN:

- **Extend the Life of Your Septic System**
- **Significantly Reduce Odors**
- **Reduce Maintenance Costs**
- **Rejuvenate Your Drain Field**
- **Have a "Greener" Profile**

FROM THE FIELD:

Below are before and after photos of two projects in which **EcoHancer®** delivered outstanding results:

Effluent Septic Tank with damaging heavy solids.

Effluent Septic Tank clarified with EcoHancer, & now safe for the drain field.

Severe sewage & grease flooding entire field to the extreme.

EcoHancer treatment results in remarkable field recovery.

UNDERSTANDING YOUR SEPTIC SYSTEM

- **Malfunctioning septic systems let off offensive odors that may drive away business.**
- **Sewage backup into your business requires costly cleanup.**
- **A new septic system can be a substantial expense & cause major disruption to your business.**

COMMON CAUSES OF SEPTIC SYSTEM CHALLENGES FOR CONVENIENCE STORES:

HIGH STRENGTH WASTE

- Coffee and grounds, soda, sugar, and dairy products are common daily waste sources in a convenience store. These products increase the risk of contamination in the drain field due to biological reactions in the waste stream.
- Drastic increases in Nitrogen and Biological Oxygen Demand (BOD) are major risk factors regulated by municipalities and local departments of health.

MEDICATIONS & CLEANERS

- Cleaning agents used within the store and medications from those using restroom facilities enter a convenience store's waste stream every day.
- Modern sanitizers, cleansers, and medications are more powerful than ever before and kill the bacteria necessary for the septic system to function efficiently.
- Most septic system additives include bacteria cultures or enzymes, which are canceled out by these frequently used bacteria-killing products.

ARE YOU EXPERIENCING PROBLEMS WITH YOUR SEPTIC SYSTEM?

IF YOU ARE EXPERIENCING ANY OF THE FOLLOWING:

- **PUMPING MORE THAN ONCE PER YEAR**
- **ODOR**
- **WATER ACCUMULATING IN DRAIN FIELD (PUDDLING OR WORSE)**
- **PLUMBING BACKUPS OR SLOW DRAINS**
- **USING A SEPTIC ADDITIVE THAT IS NOT WORKING**
